Documents (aka Objects)

From the "Documents" tab you can browse and search for objects in this collection. All standard query constructs are supported except for `map/reduce` queries. To use `map/reduce`, use the MongoDB shell (note that temporary result collections will be viewable in MongoLab).

You can also add, edit, and delete individual documents from here. Bulk collection updates are not yet supported in this UI (although they are supported in the shell).

API Key

Each user of your MongoLab account has a separate API key. The current key for this user is displayed below. You may regenerate the key for this user at any time.

API key: `llqbijHmg2Tr-xx1JXsbF83YPprQ1h8`

Regenerate API key

If using a MongoDB driver or client library is not an option, you may access the databases in this account via the [MongoLab Data API](#). Access to this RESTful API is disabled by default.

Data API Access: Enabled
