VIEW DOCS

AlchemyAPI offers a set of three services that enable businesses and developers to build cognitive applications that understand the content and context within text and images. For instance, using AlchemyAPI, developers can perform tasks such as extracting the people, places, companies, and other entities mentioned in a news article or analyze an image to understand the contents of the photo.

- AlchemyLanguage**  
AlchemyLanguage is a collection of 12 APIs that offer text analysis through natural language processing. The AlchemyLanguage APIs can process text and help you to understand its sentiment, keywords, entities, high-level concepts and more.
- AlchemyData**  
AlchemyData provides news and blog content enriched with natural language processing to allow for highly targeted search and trend analysis. Now you can query the world's news sources and blogs like a database.
- AlchemyVision**  
AlchemyVision understands and analyzes complex visual scenes without needing textual clues. Developers can use this API to do tasks like image recognition, scene recognition, and understanding the objects within images.
